FASTFAX

FASTFAX EXTRACTOR™

THE NEW PARADIGM FOR IMPLEMENTING SYSTEM i (iSERIES 400) FAX

You're not puzzled — you know you want to add faxing capabilities. You just don't know how to do that without committing the time or personnel to undertake a major construction project. Now FastFax Extractor allows you to turn your existing spooled files into outbound faxes or emails — with absolutely no programming! With Extractor, you can "faxinate" your applications in about one hour. Extractor does all the work while you get all the credit. Extractor reads information from inside your spooled file and turns it into a fax or email. All you have to do is tell Extractor where the fax number or email address resides. Simply capture a spooled file on-line and follow the directions in the pop-up windows. Extractor can break apart a spooled file into separate faxes or emails, attach cover sheets and/or additional documents, merge forms, batch all faxes to the same location, and transmit the fax or email during off-hours to save money — all without modifying a single line of business application code. If the fax number or email address is not in the spooled file, Extractor can capture that information from the database that created the spooled file.

WORKING WITH EXTRACTOR

- Capture the spooled file you want Extractor to use as a template by placing an 'X' next to it and pressing the 'Attention' key.
- When prompted by the on-screen Extractor script, fill in the necessary information to build the template. This information tells Extractor how to extract the fax number, email address and recipient information; which documents of the spooled file to fax or email; which form to merge with the data; when to insert a page break, where to look for the spooled file; and how the spooled file will fax.
- Activate the template.
- FastFax does the rest — processes the spooled file into faxes or emails, merges blank forms, attaches a cover sheet or additional documents, batches faxes going to the same location, transmits during off-hours, and confirms transmission.

FASTFAX EXTRACTOR WORKS WITH EITHER FASTFAX/ENTERPRISE, FASTFAX/ULTRA, FASTFAX/BLUE OR FASTFAX/PLUS.

BEST SUITED FOR THE FOLLOWING JOBS

Sending Faxes or Emails:

- Sending faxes and emails without any programming.
- Creating faxes and emails from a spooled file batch that contains many documents going to multiple locations.
- Breaking apart a spooled file; some for faxing, some for emailing others for printing based on selection criteria.

Advanced Features:

- Easily created from on-screen instructions, requiring no programming or technical skills to use.
- Can select some pages to print while faxing others.
- Supports both single- and multi-page faxes.

- Extracts multiple recipients from a single document.
- Tracks faxes by sender.
- Extracts fax number, email address, recipient information, and faxing information from the spooled file, FastFax directories or an System i (iSeries 400) database file.
- Automatically attaches a cover sheet.
- Automatically merges a form.
- Offers off-hour delivery options.
- Offers various run time options.
- Add conditions to route outbound documents to approvers prior to faxing.
- Change sender details based on spool file data.
