

Virtual Enterprise FoIP (Fax) Solution

- Route, archive and manage your mission critical documents
- Consolidate physical fax servers via virtualization, including Cloud
- Modernize your fax regardless of your infrastructure

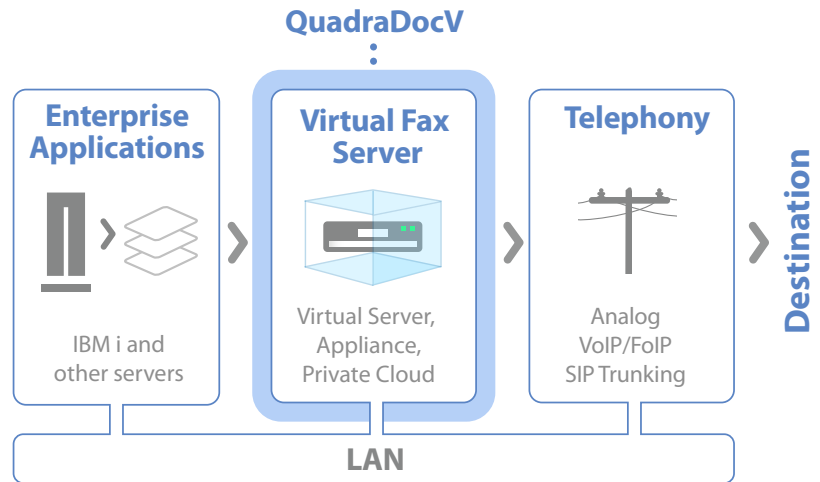

Business Challenges

Running your production fax server on outdated hardware or unsupported operating systems is time consuming to maintain and poses security, compliance and downtime risks.

The Solution: QuadraDocV

QuadraDocV is a highly flexible production-level virtual fax server that integrates directly with your document-generating enterprise applications. It enables you to automatically send, receive, route, archive and manage your faxes.

QuadraDocV eliminates the need for physical fax cards or a dedicated, physical fax server.

With QuadraDocV, you can:

- Fax using your existing physical or virtual server, a dedicated fax Appliance, or a Private Cloud installation
- Migrate from old hardware and risky operating systems
- Centralize management, tracking and expense reporting
- Eliminate manual faxing, mailing, printing and delivery
- Ensure your fax system complies with strict data security regulations (*HIPAA, PCIDSS, etc.*)
- Rest assured that your fax system will work when it's needed
- Quickly scale to support your faxing volume needs

Features:

- Integrates with your ERP (SAP, Sage) and any other enterprise application
- Routes, archives and manages critical documents
- Supports batch faxing, emailing, printing and archiving
- In-bound routing ensures correct delivery
- Supports any IT or telephony infrastructure
- Disaster recovery in as little as ten minutes
- Only authorized users can access data
- Distributes in popular formats, such as PDF and Word
